

the *in situ* conditions of the study. The results of the *in situ* tests are presented in Table 1.

Figure 1 shows the typical load-displacement curves for the *in situ* tests. The load-displacement curves for the *in situ* tests are similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests.

The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests.

The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests.

The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests.

The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests.

The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests.

The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests. The load-displacement curves for the *in situ* tests are also similar to those for the *in vitro* tests.
